

AI SUBSCRIPTION DECISION PLATFORM

SubSense

Most subscription tools tell you what you already spent. SubSense gets ahead of the charge — reading every renewal before it hits, explaining what it means in plain terms, and handing you a decision instead of another line item.

18 governing docs · Implementation Freeze baseline

3 Primary user segments	5 Product pillars	8 Measurable MVP success metrics	15/15 Current build phase
---	---	--	---

CURRENT PROBLEM

Modern users pay for recurring subscriptions across entertainment, productivity, AI tools, education, cloud services, fitness, and memberships. Because these payments renew automatically, awareness breaks down long before the decision ever gets made.

Awareness gaps

- Users forget renewal dates
- Users underestimate annual spending
- Duplicate or overlapping services go unnoticed

Decision gaps

- Shared subscription payments become difficult to track
- Cancellation decisions are delayed until after renewal
- Existing tools mostly report spending after the fact

VISION

Build the most trusted AI-assisted subscription decision platform that helps users understand recurring spending, stay informed before renewals, and make confident subscription decisions without taking control away from them.

MISSION

Help users become aware of recurring subscription spending through timely reminders, financial context, and AI-assisted decision support — while ensuring users always remain in control of renewal, cancellation, sharing, and payment decisions.

SEGMENT 01 ·
PRIMARY

**Individual
subscriber**

Individuals with multiple recurring subscriptions across entertainment, productivity, AI tools, education, and utilities.

"What am I paying for, and what renews soon?"

SEGMENT 02 ·
PRIMARY

**Students &
professionals**

Users paying for AI, productivity, streaming, and learning subscriptions who need clarity without a finance background.

"Is this subscription still worth reviewing?"

SEGMENT 03 ·
SECONDARY

**Shared
households**

Roommates, couples, families, and small friend groups splitting streaming, software, or membership costs.

"Who owes what for shared subscriptions?"

Excluded from MVP: enterprise teams, large organizations, procurement departments, and full business spend management.

03 Score: Success Metrics THE SCORE

PROPOSED NORTH STAR METRIC

New accounts adding one subscription in their first session. Proposed only —
all eight metrics below are weighted equally.

Activation rate ≥ 80%

METRIC	TARGET	MEASURED BY
Activation rate	≥ 80% of new accounts add one subscription	Onboarding flow analytics/event log

	within the first session	
Time to first subscription	Median under 3 minutes from account creation to first saved subscription	Timestamp diff, account creation → <code>subscriptions</code> insert
Reminder delivery success rate	≥ 99% of due reminders result in a delivered notification within 15 minutes of schedule	<code>reminder_history</code> and <code>notifications</code> audit
AI insight generation success rate	≥ 95% of AI requests return a usable recommendation, not a fallback state	<code>ai_recommendations</code> success/fallback ratio
Shared payment completion rate	≥ 90% of payment requests reach paid or archived within 14 days	<code>payment_requests</code> status/age query
Core flow error rate	Under 1% of primary-flow requests return an unhandled error	Error logs / <code>audit_logs</code>
Demo acceptance	All 12 Critical E2E scenarios pass with zero open Critical defects	QA sign-off per Exit Criteria
Day 30 retention rate <code>DEC-041</code>	≥ 40% of activated users	

	still active 30 days later	users.last_login_at vs. activation date
--	----------------------------	---

04 What We're Building THE WHAT

01

Subscription awareness

Know what subscriptions exist.

- Searchable catalog + custom entry
- Add, view, edit, archive lifecycle
- INR/USD, 4 billing frequencies

02

Renewal & retention awareness

Know when renewals occur — and keep hearing from SubSense between them.

- Upcoming renewal visibility
- 8 reminder types, email-first via Resend
- Post-renewal review prompt
- + Monthly digest + lapsed re-engagement

03

Financial awareness

Understand monthly and annual cost.

- Monthly/annual equivalent calculations
- Recurring spend insights
- Decision Workspace financial context

04

AI decision support

Receive contextual, explainable insight before renewal.

05

Shared subscription management

Track split amounts and reminder status.

+

Premium & capstone demo

Non-production demonstration layer.

- Renewal review prompts
- Duplicate subscription detection
- Explainable, non-executing recommendations
- + Varied, non-templated AI copy tone

- Shared member management
- Payment request status: pending → paid
- Rail-aware cancellation guidance

- Razorpay Test Mode upgrade flow
- Developer/Test Utilities
- No live financial processing in MVP

05 Guardrails THE HOW WE STAY HONEST

Key risks

AI overreach — mitigated by enforcing BR-001 in backend and frontend copy

RLS mistakes — mitigated by testing owner/member/admin access paths

Scope expansion — mitigated by MVP scope discipline and change control

Defects found too late — mitigated by the Phase 9.5 mid-build stress checkpoint

Payment confusion — mitigated by labeling Razorpay as Test Mode everywhere

Explicitly out of scope (v1)

- ✗ Automatic bank account or email scanning
- ✗ Apple/Google subscription sync
- ✗ Automated third-party cancellation execution
- ✗ Production billing / live Razorpay payments
- ✗ Browser extension, mobile app, enterprise administration

DEPENDENCIES & ASSUMPTIONS

- Users are willing to manually enter subscriptions without bank/email auto-import
ASSUMPTION
- Email-first reminders (no push/mobile app) are sufficient for MVP engagement
ASSUMPTION
- AI model can produce high-confidence renewal insight from manually entered data alone
ASSUMPTION
- Razorpay Test Mode is an acceptable substitute for live payment validation in this capstone context
ASSUMPTION
